+1 (603) 540-7703

Technical Skills

Languages: Rust, Java, C, C++, Python, Bash, XML, JSON, Go, C#, Scala, LaTeX, HTML, R, JavaScript, Matlab

Technologies: Linux, Git, Jira, Cargo, Bitbucket, CI/CD, GitLab, AWS, Azure, Unix, Jenkins, Gradle, Virtual Machines, REST, APIs, Docker, Unit Testing, Static/Dynamic Analysis, Spirent, Embedded Systems, Distributed Systems, Network Switching, HPC, Cloud, Virtualization

Network Protocols: SIPE, HAIPE, NTS, NTP, PTP (IEEE 1588), 802.1Q, 802.1BA, 802.1AS, STP, 1722, TLS, TCP/IP

Clearance: Secret, US Government Clearance

Professional Experience

Massachusetts Institute of Technology Lincoln Laboratory (MIT LL)

Lexington, MA

Senior Software Engineer

May 2024 - Present

- Architected a software-based high-assurance cryptographic system using Rust and post quantum crypto
- Provided design feedback and insight to numerous research and development teams
- Coordinated R&D teams to incorporate cutting edge technologies into prototype embedded systems
- Completed numerous advanced courses to further my technical, business, leadership and presentation skills

General Dynamics Mission Systems (GDMS)

Dedham, MA

Principal Investigator / Senior Advanced Software Engineer

March 2023 - May 2024

- Led a team of two senior software engineers to deploy mission critical software written in Rust
- Researched the safety, security, and performance of deploying Rust in cryptographic environments
- Designed and implemented software to control front panel displays of classified embedded products
- Developed contributions to a shared classified codebase as part of the Core Security Library
- Collaborated with security and systems engineers to define and refine software conformance requirements

University of New Hampshire Interoperability Laboratory (UNH IOL)

Durham, NH

Lead Software Architect / Consortium Lead / Agile Scrum Master

May 2019 - March 2023

- *Speaker / Author, "Experimental Analysis of the Performance and Scalability of Network Time Security for the Network Time Protocol," IEEE ISPCS (2022)*
- Led a team of six independent contributors to develop software certification tooling used globally
- Primary vendor contact for Avnu and Open Alliance consortium members (Cisco, Intel, Netgear)
- Managed weekly testing reservations and standups, ensuring product accuracy and delivery commitments
- Mentored, supervised and trained 20 IOL employees and 19 interns over 7 years of employment
- Engineered a standalone software testing product to certify the security of Single Pair Ethernet devices
- Architected a RESTful Device Under Test remote control interface for streamlined automation
- Made significant additions to the IEEE 802.1Q, 802.1AS, and C37.238 networking standards
- Collaborated with industry design engineers and standards committees to develop embedded devices

HighTech Bound Summer Internship Program Supervisor

July 2018 - August 2022

- Created and managed a six week network technology immersion program for ambitious student employees
- Mentored 20 UNH summer campers in networking protocols, Python scripting, and circuit construction

Software Developer

December 2016 - May 2019

- Developed and maintained features of vIOlett, a Time Sensitive Networking (TSN) device certification tool
- Maintained multiple CI/CD pipelines, unit testing, and automated build scripts
- Contributed to a RESTful API definition for remote control of certification test tools

Embedded Systems Technician

June 2016 - December 2016

- Performed conformance testing on industry devices and defended subsequent certification reports
- Primary interface for engineers and developers of the Time Sensitive Networking vendor community

Eagle Scout, Boy Scouts of America, Troop 292

Hooksett, NH

Education

University of New Hampshire at Durham, NH

M.S. Computer Science, Summa Cum Laude

B.S. Computer Science, Magna Cum Laude
